EDUCATION

University of Waterloo

Sep. 2025 – Apr. 2030

Candidate for Bachelor of Software Engineering

Awards: **Ted Rogers Future Leader Scholarship**, President's Scholarship (95%+ admission average)

WORK EXPERIENCE

Intact | Software Developer Intern

May. 2026. – Present

- Engineered and deployed an internal event check-in application that **streamlined registration for 400+ participants** through barcode scanning and automated attendance validation
- Developed backend GraphQL and Spring Boot services for an internal engineering metrics platform, including **tracking AI adoption across 4+ AI tools for 500+ engineers**, enabling reporting by individual, team, and VP
- Built a Spring Boot service that automated branch creation, configuration generation, and pull requests, orchestrating CI/CD pipeline runs through an internal Jenkins-based tool across 3 engineering departments.
- Led demos for internal developer tools, gathered stakeholder feedback, and translated requirements into new features

PointClickCare | Software Engineering Intern, Early Tech Talent Incubator

Jul. – Aug. 2025

- Developed a full-stack blogging platform using Spring Boot, React, TypeScript, and Microsoft SQL Server
- Built REST APIs for user authentication, role-based permissions, blog posts, comments, and CRUD operations
- Designed a relational database and optimized SQL queries for backend data management
- Presented weekly product demos to engineers and managers, implementing feedback into new features

VOLUNTEERING

The Shifa Gala — The Oakville Hospital Foundation | *Fundraising Volunteer*

Apr. 2021 – Present

- Managed virtual auction platform which **received traffic from 300+ event attendees**, and generated an additional \$4000 in donations
- Led a youth volunteer team producing marketing materials for annual fundraising gala raising **\$150,000+** to date

Women in Engineering (WiE) Student Committee | *Graphics Director*

Sept. 2026 – Present

PROJECTS

Connections | *Python, FastAPI, Docker, PostgreSQL, sentence-transformers, pgvector*

- Integrated a **local sentence-transformers embedding model** to generate and automatically update semantic vector representations of user-collected text, stored and queried via the pgvector Postgres extension
- Designed a scoring pipeline that independently normalizes structured metadata and cosine-similarity-based semantic signals before combining them into a single weighted relevance metric, surfaced through a REST API

BookBytes | *Python, Matplotlib, Pandas, Selenium, BeautifulSoup*

- Built a Python CLI application that scrapes publicly available user reading histories from a book-tracking platform using Selenium and BeautifulSoup
- Processed and structured hundreds of book records per profile** into a Pandas DataFrame for efficient analysis
- Implemented automated data visualizations with Matplotlib to analyze reading trends, genre preferences, ratings, and volume over time

Sign Quest — JamHacks8 | *Python, OpenCV, MediaPipe HandLandmarker, Flask*

- Developed a backend computer vision pipeline using OpenCV and MediaPipe Hand Landmarker to extract real-time hand landmark features from video input
- Implemented landmark-based gesture comparison logic to recognize and validate user-performed sign language gestures within an interactive game

TECHNICAL SKILLS

Languages: Python, Java, C, C++, Bash, SQL

Developer Tools: VS Code, Git, Docker, Postman, CI/CD, Jira, GitHub Copilot, Claude Code, Devin

Libraries/Frameworks: Spring Boot, GraphQL, Matplotlib, pandas, React
